

ZAKRILY:
EVERY CHILD LEARNS
DIFFERENTLY. EDUCATION
SHOULD TOO.

زاكريلي

our solution to egypt's biggest education crisis

problem

Egypt's classrooms can't teach
26M kids individually.

- Schools and tutoring just repeat the same one-size-fits-all teaching style.
- ~50 avg. students/classroom, even after 98,000 new classrooms, teachers can't give individual attention
- 56% of late-primary children aren't reading-proficient (World Bank/UNESCO)
- The system is too crowded to teach individually. What families pay extra for isn't personalized either.

Total families pay almost as much
as the state

Total Family tutoring
spend (anually)

Total pre-university
education budget

solution

AI-Powered National Egyptian School education app

Practice That Adapts

Every quiz adjusts to you — more where you struggle, less where you've mastered it — with streaks, XP, and leaderboards to keep it fun along the way.

Learn It, Don't Memorize It

Unique feature for each subject: a talking chatbot for English/French speaking practice, photo-based paper-solving for Math, and interactive simulations for Science, turning passive review into active understanding.

Nawwara: Your 24/7 Tutor

Every question is skill-tagged to guide what you practice next, and you can chat with Nawwara anytime to ask about a lesson. Support that's always there, not just at lesson time.

business model

Zakrily Plus - Parent Subscription

Parents pay a monthly or yearly subscription for premium access to Zakrily. Students get unlimited personalized practice, Nawwara AI tutoring, adaptive learning paths, exam preparation, detailed progress tracking, and a parent dashboard showing their child's progress and weaknesses.

Exam & Learning Packs - One-Time Purchases

Students and parents can purchase focused packs for specific subjects, grades, or exam periods. Each pack provides personalized revision plans, practice questions, mock exams, and AI-powered support designed around the Egyptian curriculum and the student's own understanding.

Zakrily for Schools - B2B Licensing

Schools and tutoring centers pay for Zakrily on a per-student or annual basis. Teachers get dashboards to track student performance, assign personalized practice, and identify common weaknesses, while students receive the same adaptive learning experience within their school.

Go-To-Market Strategy

Egyptian families already spend heavily on help outside the classroom — Zakrily meets that same demand digitally, for far less.

EGP 47B → 60B

Egypt's private-tutoring market

23.3M+

K-12 students enrolled across Egypt

Up to 75%

of secondary students already pay for private tutoring

82%+

internet penetration — 96M+ Egyptians online

Zakrily channels that existing willingness to pay into an AI subscription that costs a fraction of one tutoring session.

Sources: Fast Company Middle East (2025); British Council; Egypt MoETE (2022); DataReportal Digital 2025 Egypt

Beachhead: start narrow, prove it works

Zakrily doesn't launch as "all subjects, all grades." It launches where its AI features solve the sharpest, most specific pain.

Launch parameters

Geography – Cairo and Alexandria first

Over half of Egypt's private-school student population is concentrated in and around Cairo.

Grades – Primary stage (4–6)

Where tutoring dependency starts, and parents are still hands-on with daily homework.

Subjects – Math, Science & English

The three subjects where Zakrily's AI features are most complete today.

Why this segment, first

Math AI Photo Checking

Answers the #1 homework frustration for these grades — parents can't always check the work themselves.

English AI Voice Practice

Gives daily speaking practice that a crowded classroom, or even a private tutor, rarely has time for.

Curriculum-grounded chatbot

A 10-year-old can ask "how do I solve this?" and get an answer grounded in their own textbook, not a generic reply.

Goal: prove learning outcomes and retention in one city and three grades — then expand subjects and grades.

Acquisition: parent-led, not ad-led

Early users are found, not bought — the same way parents already find tutors: through other parents.

Parent communities first

Show up in the Facebook and WhatsApp groups parents already use to trade tutor recommendations and homework help.

Shareable skill reports

Turn each student's skill-based progress report into something worth forwarding to another parent — proof, not promotion.

A free hook, not a free trial

One full unit per subject, free — enough for a parent to see Zakrily actually adapt to their kid before deciding to pay. The unlock wall does the selling.

Micro-creators, not media buys

Work with a small number of Egyptian parenting and education creators for authentic demos, instead of a paid-ad budget the prototype doesn't have.

Teacher & school pilots

Partner with a handful of Alexandria and Cairo schools to place Zakrily with students already on this curriculum.

A character people talk about

Nawwara isn't a logo — she's who kids ask for by name and what parents describe to each other. Voice notes, reaction clips, shareable moments: she becomes the marketing, not the budget for it.

From pilot to platform

A deliberately staged rollout — grow the grades and geography once the outcomes are proven, not before.

Phase 1 • 0–6 months

Prove it

Pilot Grades 4–6, Math, Science & English, in a handful of Alexandria and Cairo schools. Validate photo-checking and voice practice against real usage and outcome data.

Phase 2 • 6–12 months

Expand it

Add grades and subjects the curriculum-grounded chatbot already supports. Introduce a paid subscription alongside a free layer.

Phase 3 • 12–24 months

Scale it

Expand beyond Cairo and license Zakrily to schools and tutoring centers directly (B2B2C), growing through skill-based referrals.

The growth loop: better skill data → more personalized practice → visible improvement → parent referrals → more skill data.

SWOT analysis

Where Zakrily is genuinely strong, where it's still unproven, and what could help or hurt the path to market.

✓ Strengths

- Curriculum-grounded AI — not a generic chatbot layered on top of school content
- Three distinct AI modes (chat, voice, photo-check) covering how students actually study, not just Q&A
- Skill-based practice pinpoints exactly where a student is weak, not just right/wrong answers

⚠ Weaknesses

- Still prototype-stage — no market validation or retention data yet
- Launching with only 1–3 grades and three subjects limits early addressable users
- Every new grade/subject needs fresh curriculum content and AI accuracy checks before launch

💡 Opportunities

- Egypt's private-tutoring market is large and growing (\$47B → \$60B)
- Internet and smartphone use keep rising, widening the reachable audience yearly
- School and tutoring-center partnerships open a B2B2C path beyond direct-to-parent sales

🛡 Threats

- Free generic AI chatbots (ChatGPT and similar) are an easy, if less curriculum-fit, substitute
- Better-funded regional ed-tech players could copy the feature set
- Parents may be cautious trusting AI-graded feedback without proof it improves grades

Pricing & positioning

Free EGP 0

Always free

- 5 chatbot questions per day
- 2 math photo-check per week
- 5 minutes voice practice per week
- 1 unit unlocked per subject
- Enough to prove the app works before paying

Zakrily Plus EGP 150

student / month

- 50 curriculum chatbot per day
- 20 math photo-checking per day
- 20 minute English AI voice practice
- AI-generated extra practice questions

Family EGP 250

/ month, up to 3 children

- Everything in Plus, per child
- Parent progress dashboard
- Priority support

Exam Pack EGP 50

student / month

- Unlimited access to that one subject, all units and practise
- Unlimited photo-checking / practice for that subject

Revenue model & financial outlook

Illustrative 3-year projection — built for validation first, revenue growth second.

B2C subscriptions

Free → Plus → Family plans, sold directly to parents. Primary revenue from launch through Phase 2.

B2B2C school & center licensing

Bulk seat licenses sold to schools, introduced from Phase 2 onward.

Future: exam-prep bundles

Term- and exam-season add-ons once the core subscription base is established.

Projected annual revenue (USD, millions)

Paying users: ~2K → 25K → 90K · ~150 school/center partners by Year 3
